Warranty Vault

SE4041 Assignment 02 – part A

User Guide

Student name : Hitiarachchi A M L

Student ID – IT22079640

This guide explains how to use Warranty Vault to keep purchase receipts and track warranty expiry dates.

1. Welcome

Warranty Vault helps you keep warranty information for electronics and household products together. You can import a receipt image or PDF, review the details recognised from it, choose a warranty length, and receive local reminders before the warranty expires.

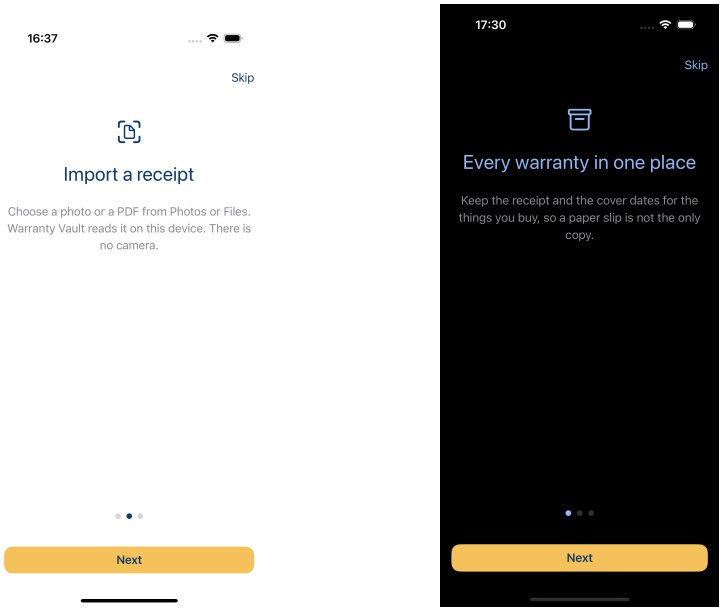

FIGURE U1: onboarding in both light and dark modes

2. Getting started

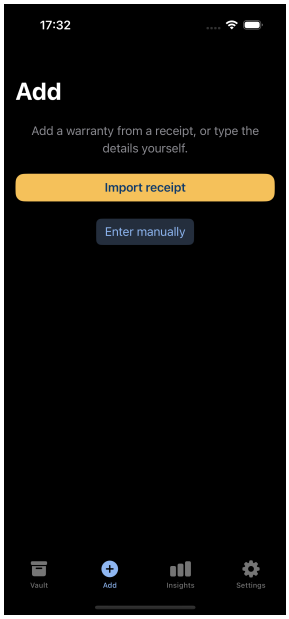

1. Open Warranty Vault.
2. Read the onboarding screens to understand the main features.
3. Continue to the main app and open the add flow when you are ready to save your first warranty.

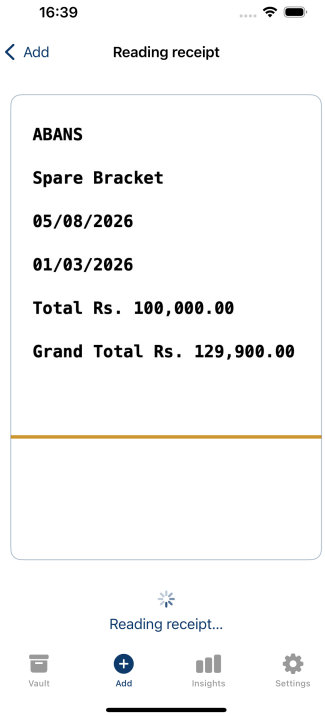

3. Add a warranty from a receipt

4. Open the add flow.
5. Choose a receipt image from Photos or select a file from Files. Images and PDFs are supported.
6. Wait while the app reads the text on your device.
7. Review the suggested store, purchase date, total amount, and category.
8. Correct any values that are wrong or incomplete.
9. Choose the warranty period: 6, 12, 24, 36 months, or a custom period.
10. Save the item. The app calculates the expiry date and schedules reminders if reminders are enabled.

4. Add a warranty manually

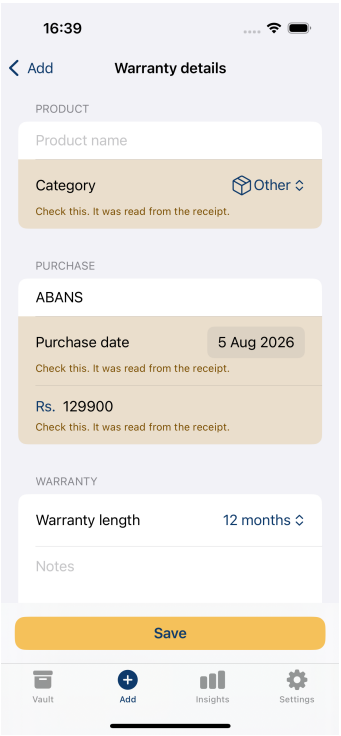

If you do not have a receipt image or the text could not be recognised, use the manual entry option. Enter the product or item details requested by the form, including purchase information and warranty length. Check the date and amount carefully before saving.

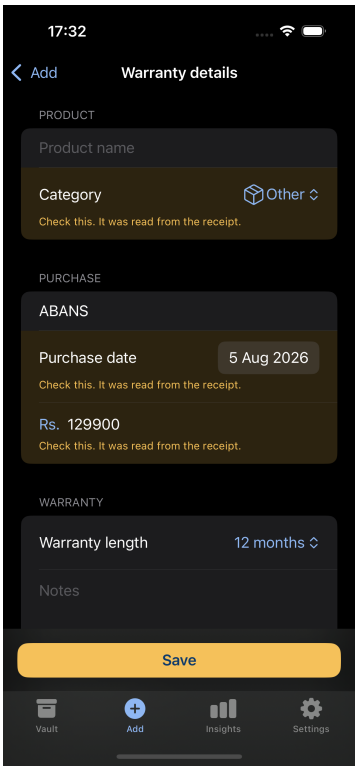

5. Amber fields and recognised text

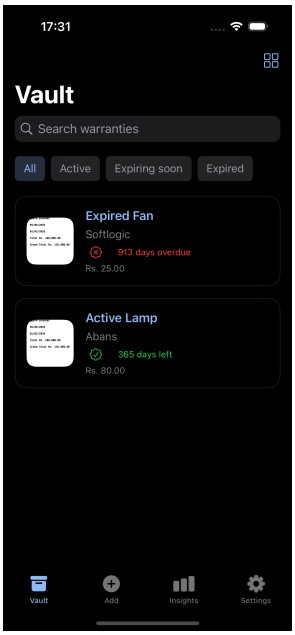

Amber highlighting means that a field may be uncertain. It does not automatically mean the value is wrong. Tap or edit the field and compare it with the receipt. You can expand the recognised-text section to inspect the raw text read from the document. Always check dates and amounts before saving.

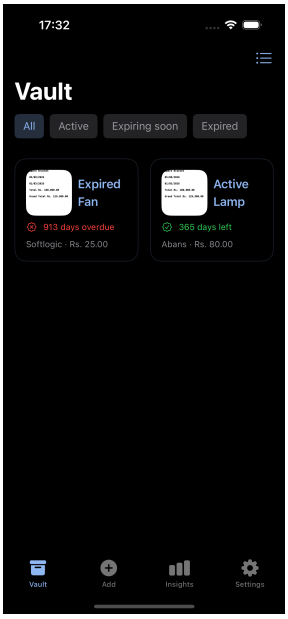

6. Browse your vault

Your saved warranties appear in the vault. Depending on your preference, use list or grid view. Use search to find an item by its details, and use filter chips to narrow the displayed items. Swipe actions and the context menu provide quick actions for an item. Check the item status to distinguish active, expiring-soon, and expired warranties.

7. View a warranty

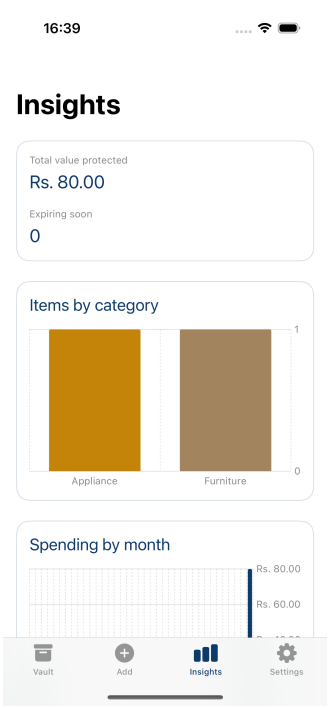

Open an item to see its purchase and warranty details. The expiry ring provides a visual indication of the warranty period. You can pinch to zoom or double-tap the receipt image where supported, and use the share option to share the item or receipt information.

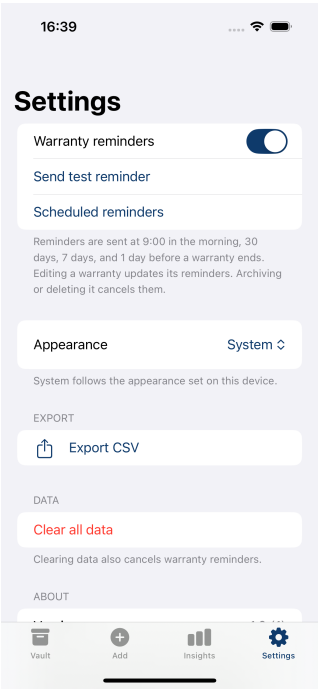

8. Reminders

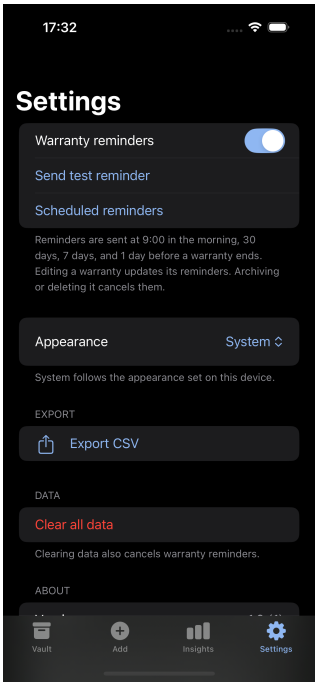

The app schedules local reminders 30, 7, and 1 day before a warranty expires. Ensure notifications are permitted in your device settings and that reminders are enabled in the app. The Settings screen includes Send test reminder, which sends a test notification after about five seconds, and Scheduled reminders, which shows pending reminders. The test notification checks the delivery path; it does not prove that a future calendar reminder has already appeared.

9. Insights

Open Insights to review a summary of your saved warranties, items by category, spending by month, and upcoming expiries. These charts help you understand what you have recorded and which warranties may need attention.

10. Settings

- Reminders: turn reminder scheduling on or off.

- Appearance: choose the available appearance preference.
- Export to CSV: create a spreadsheet-friendly export. The amount column is labelled Amount (LKR).
- Clear data: use this carefully. The app asks for confirmation before clearing saved data.
- Send test reminder: check the local notification path.
- Scheduled reminders: review the reminders currently pending.

11. Tips for better receipt recognition

- Use a clear, well-lit image with the whole receipt visible.
- Keep the receipt as flat as possible and avoid shadows.
- Make sure the printed date and total are readable.
- Review every suggested field before saving, especially the purchase date and total.
- If OCR is inaccurate, correct the fields manually or use manual entry.

12. Troubleshooting

Problem	What to try
Receipt text is missing or wrong	Choose a clearer image or PDF and review the amber fields and raw recognised text.
The date is incorrect	Check the printed receipt date and correct it before saving.
The total is incorrect	Compare the suggested amount with the receipt's final total, not cash, change, tax, or subtotal.
No reminder appears	Check that reminders are enabled and notifications are allowed on the device; inspect Scheduled reminders.
A receipt cannot be selected	Try importing it from Photos or Files in a supported image or PDF format.
A warranty is not easy to find	Use search, filters, or switch between list and grid view.

13. Privacy

Receipt text recognition is performed on the device using Apple Vision. The app's stated design does not require uploading receipt images to an external OCR service. Receipts can contain personal or purchase information, so keep your device protected and share exported or receipt information only when you intend to.

Current limitation: Warranty Vault does not include live camera capture in this version. Import an existing image or PDF instead.
